

Class Agenda & Brief Content Description
Understanding & Application of Engineered Wood Products
May 16, 2009 East TN Chapter of ASHI
Presenter; Jim E. Rinehart with Boise Cascade

The purpose of this class is to give the attendee a thorough understanding of engineered wood products. There is a power point slide presentation specific to each class segment.

The attendee will learn to identify the different series of I-joists and to understand the load and span capabilities of each series.

The presentation will show the correct on site storage, proper handling and installation of the Engineered Wood Products for both floor and roof framing.

The attendee will be shown the incorrect installation and application of Engineered Wood Products that are likely to be seen during a home inspection.

We will discuss approved repairs and/or on-site fixes for incorrect installations.

Specific bracing and reinforcement requirements for specialized loading and cantilever applications will be learned.

The attendee will learn to understand the proper applications, connections and support requirements for LVL Engineered Wood Beams.
